

1300VA THREE-PHASE DC/AC SINE INVERTER

24Vdc, 110Vdc, 115Vdc, 127Vdc to 400Vac

GENERAL FEATURES:

**Sine wave output voltage
Suitable for motors control
High input-output isolation
3000Vrms**

Alarm by isolated relay contacts

Remote ON/OFF opto-coupled

DESCRIPTION

The WRHD-1300 consists of three phase sine-wave DC-AC inverters with galvanic isolation between input and output.

The WRHD-1300 has a maximum output current protection. This protects the semiconductors even when an output short-circuit occurs. It also features a disable function for input under-voltage.

INSTALLATION

- The unit has 4 threaded holes for the fixation on a mounting surface.
- The unit has internal fans. For an appropriate cooling, the air input and output should be free of elements that cause and an air flow reduction (minimum recommended distance to other objects 50mm).
- To start up the unit without a remote ON/OFF signal, make the following connection

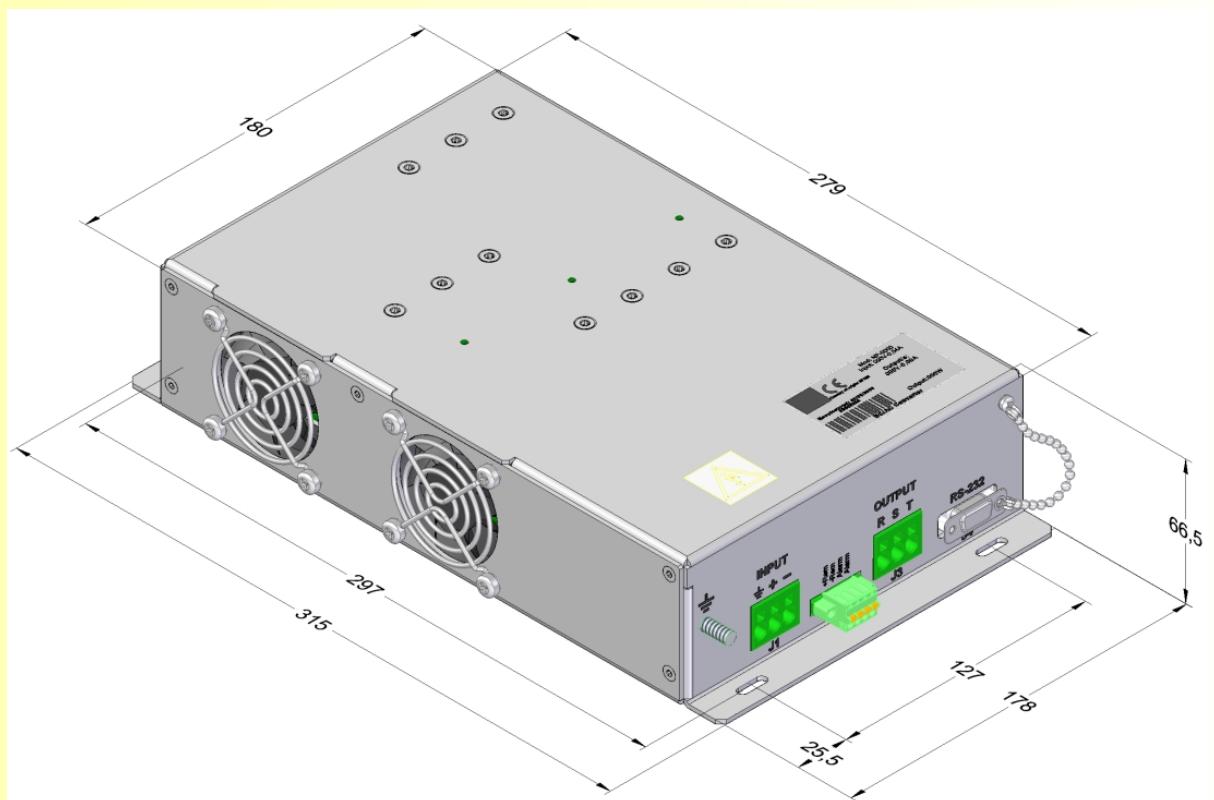

For safety reasons, the following requirements must be met:

- Provide the equipment with some kind of protective enclosure that complies with the electrical safety directives in effect within the country where the equipment is installed.
- Include an input fuse with a rating immediately higher than the maximum input current.
- Use cables of adequate cross-section to connect inputs and outputs. The following table lists the maximum currents and the minimum cross-sections for the cables used for each power connection.

	Input 24V	Input 110V	Output 400V
Current	70A	16 A	1.88A
Cable cross section	16 mm²	1.5 mm²	0.75 mm²
