

. SAP : RTD Penetration probe

(Best accuracy)

RTD Penetration probe (Sensitive element: RTD, NTC, ...)

. TAP : Penetration thermocouple

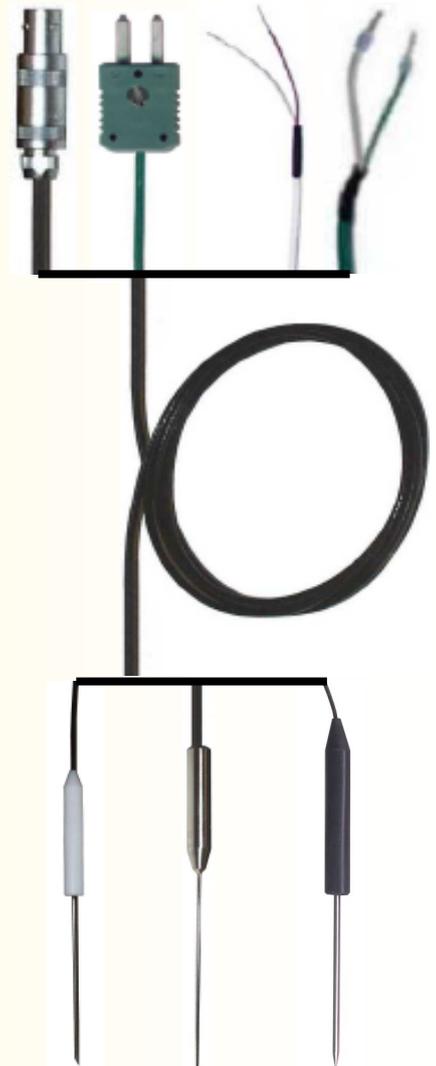

(Best response time)

Penetration thermocouple (Sensitive element: J, K or T thermocouple)

. TAH : Hypodermic needle thermocouple

. Applications :

- Cooking control
- Temperature measure of vacuum prepared dish
- Core temperature measure.

SAP - TAP type probe are particularly adapted for applications requiring an outlet temperature at the heart product like in food field (cooking control, grill room, etc) or industry (autoclaves).

Different tip Ø: Stainless steel sheath (316L): Ø 1,9 to 6 mm
 Conic or beveled extremity
 Hypodermic needle: Ø 0,8 or 1,2mm

Measure element: Single, duplex or triple with stepping of measure points on request.

Mounting: 2, 3 or 4 wires.

Handle: stainless steel
 teflon
 silicone

Cable: teflon (resistance 250°C)

Possible options: Bent realization
 Cable protection by stainless steel corrugate
 Bending spring in sensor output
 Different types of cable (silicone)

All models are available in bent version

SAP - TAP type sensors are delivered with 2m cable by default.

| Order code | | | | | | | | | | | | | | | |
|--------------|----------|--------------|------------|----------|---------------|------------|-------------|--------------------|----------|--------------------------|----------|----------|-------------|----------|---------------|
| TAP | J | D | 100 | - | C | D 2 | C | T | - | FEP/FEP | T | - | L | / | E |
| SAP: | Couple | S: Single | End | | End type: | End Ø | C: Bent | Handle type | | Cable type | If | | Cable | | Cable |
| RTD probes | J | (by default) | length | | C: Conical | (mm) | D: Straight | T: Teflon | | Wire insulation / Sheath | armoured | | length (mm) | | end |
| | K | or | (mm) | | B: Bevelled | | | I: Stainless steel | | | | | | | E = extremity |
| TAP: | T | D: Duplex | | | H: Hypodermic | | | S: Silicone | | | | | | | by default |
| Thermocouple | | element | | | needle | | | | | | | | | | Optional |

Option: Cold output on connection or thimble
(type and connection to be specified)

 **Terminal end:**
Mounting by default

 **Lug:**
- Spade tongue

 or
- Ring

 **FASTON clip:**
- 2.8mm
or
- 6.35mm

 **JAEGER type connection**

 **LEMO type connection**

 **Compensated connection**
(standard or miniature)

Production exemple

Model n°1:
- Bent
- Cable under covered corrugated
- Stainless steel handle
- Fixing collar

Model n°2:
- Straight
- Cable under corrugated
- Connection for internal wall mounting (furnace, drying stove,...)

Model n°3:
- Bent
- Cable under corrugated
- Stainless steel handle

Model n°4:
- Straight
- Cable under corrugated
- Stainless steel handle
- Multipoint

Option: bending spring in handle output.

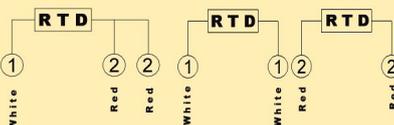

Option: protection of cable by stainless steel corrugated hose.

Proposed type of cable: temperature holding

PVC: -50°C / +105°C
teflon PFA: -80°C / +260°C
teflon FEP: -80°C / +205°C
SILICONE : -55°C / +230°C
Silk of glass: -70°C / +400°C

Wiring (European standard):
Color of the thermocouple + wire is same as sheath color,
- is white

Model n°5:
- Bent
- Teflon cable
- Stainless steel handle
- Crimped terminal

Model n°6:
- Straight
- Hypodermic needle
- Stainless steel handle
- LEMO connection

Model n°7:
- Straight
- Cable output
- Teflon handle
- Crimped terminal

Model n°8:
- Straight
- Teflon cable
- Teflon handle
- LEMO connection
