

SPECIAL REALIZATION

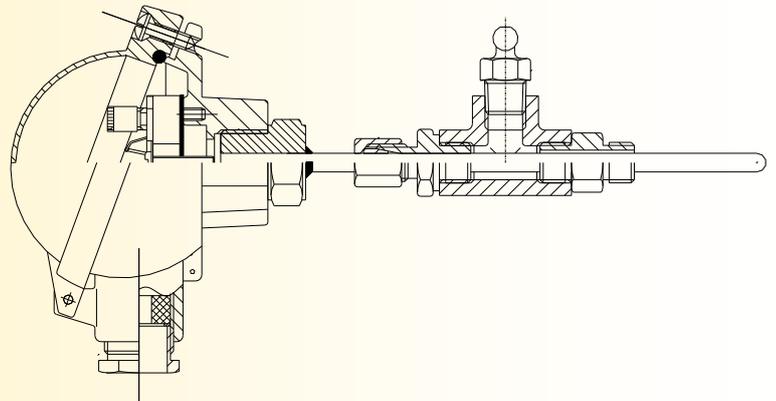

Realization on request or customer specifications.

- **Sensor with duplex measure well:** possibility to slide a standard element to verify the process measure.

- **Greasing sensor:** allow to use a greasing hole for temperature sensing without losing the greasing function (lateral greasing hole) adjustment of sensor utile length by sliding connector.

- **Transmitter sensor:** sensor with thermic insulator allowing electronic direct mounting in local with output on specific connector. Compact mounting: direct mounting on engine.
